

COMPACT MULTIFUNCTION CARD
FOR
ELECTRONIC DEVICES

5 ABSTRACT OF THE DISCLOSURE

10 An apparatus and method for enhancement of the functionality of
electronic devices. In one embodiment, the present invention is comprised of
an intermediary apparatus. The intermediary apparatus is adapted to be
communicatively coupled with an electronic device. In the present
embodiment, the apparatus is further comprised of a first module. The first
module is comprised of a first electrical connector which is adapted to enable
communication between the first module and the electronic device. The first
module is further comprised of a second electrical connector adapted to
enable communication between the first module and a second module. The
first module is further comprised of an opening that is adapted to receive a
second module. Additionally, the apparatus is further comprised of a
controller adapted to control the communication between the first module
and a second module, provided a second module is inserted into the first
20 module.
